

McAfee Mobile Security

Simple, powerful, and comprehensive security for your mobile device

Your mobile device contains many of the important details of your life: contacts, calendar, messages, photos, videos, and more.

If it gets lost, stolen, infected with a virus, or an app is unknowingly mining your personal information, you could lose your personal data, but also could possibly expose yourself, your friends, or your colleagues to credit card or bank account fraud and identity theft.

McAfee Mobile Security protects both your mobile device and your valuable data.

Explore everything the new mobile world has to offer, and do it safely and confidently with award-winning McAfee® Mobile Security. When you select new apps, shop online, browse social networks, or use your device for banking and payments, McAfee Mobile Security is there to protect you. It's as simple as it is powerful and comprehensive.

Features and Highlights

- *Real-time safeguards from viruses and spyware*—Cybercriminals are masters of disguise. If something new looks suspicious, McAfee Active Protection™ technology immediately determines its risk to help keep your mobile device secure. It scans for malicious code from files, SD cards, applications, and Internet downloads.
- *Safe searching and shopping*—Protect against web threats by blocking risky links within SMS, email, and social networking sites. It also safeguards against potential phishing sites, browser exploits, and malicious quick response (QR) codes.
- *Device lock*—Prevent misuse of your phone and personal data by remotely locking all data, including the data on your SD card, and displaying a “contact me” message on the device.
- *Remotely wipe data*—Protect your privacy by remotely deleting the data on your phone and removable memory card. You can also back up data before a remote wipe so nothing is lost.
- *Backup and restore data*—Preserve irreplaceable personal information on demand, on a schedule, or before you wipe your missing smartphone; then restore your information to a new device
- *Locate and track*—Recover your smartphone if it is lost or stolen. View its location on a map, remotely lock it, and send an alarm to make it “scream.”
- *Call and SMS filtering*—Easily filter out spammers, incorrect numbers, and unwanted SMS and MMS messages.
- *App protection with McAfee App Alert*—Keep your private data private by understanding the types of data your apps can access and share. Icons identify whether your app has access to your location, network, contact, accounts, or calendar, and checks against McAfee TrustedSource™ URL reputation database to make sure your apps are not associated with or sending your data to risky sites.
- *Uninstall protection*—Prevent a thief or another user from bypassing your McAfee mobile protection.

Manage Your Mobile Device Protection

Managing protection for your mobile device should be as easy as using it—McAfee Mobile Security downloads and installs with just a few clicks. It offers both the extensive functionality of the online McAfee web portal and a simple mobile device interface that lets you quickly execute needed security tasks. You can even initiate many commands (such as locate, lock, and wipe) using simple SMS messages with your PIN from a friend's device.

Designed for Mobile Devices

McAfee Mobile Security requires minimal battery and memory resources, allowing normal use of your mobile device without interruption.

Choose the edition for your device—McAfee Mobile Security is available for smartphones across many mobile platforms as well as Android tablets. See the comparison chart on back for information on the functionality of each.

30-Day Money Back Guarantee

If you are not 100% satisfied, you will receive a full refund.
