

# McAfee All Access 2012—Individual

Maximum protection you need for the devices you own—wherever you connect

## Protect Your Digital Life. Protect Your Devices.

Your world is dramatically different today than it was five years ago. It's a digital life where your devices are always plugged in and accessible. The explosion of mobile devices and reliance on the Internet have delivered productivity and flexibility gains never before realized. However, they have also given hackers, scammers, and cyberbullies unprecedented opportunities to target your personal data and identity. Rarely does a day go by without new, high-profile malware or exploit that target smartphones, tablets, PCs, or Macs making headlines.

McAfee rises to the challenge by enabling you to safely surf, shop, network, and interact online with McAfee® All Access. Today, most security products only protect a particular type of computer or device, making you spend precious time and money on products that only partially satisfy your needs. McAfee All Access provides comprehensive protection for your PCs and Macs, along with your mobile devices, such as smartphones and tablets, in one in-depth product. It delivers complete security that applies the protection you need to all the devices you own and safeguards them wherever you connect. It's the ultimate way to protect your digital lifestyle.

## Connect with Confidence.

McAfee All Access enables you to safely connect, surf, and socialize online, knowing that your computer, laptop, netbook, smartphone, and tablet are safe from malicious websites and hackers, scammers, cyberbullies, and identity thieves. You can track, lock, or remotely wipe your missing smartphone or tablet and keep your children safe from online predators or explicit content. Our comprehensive protection lets you connect with confidence and enjoy the convenience your digital lifestyle offers.

What makes McAfee All Access truly unique is that it allows you to centrally manage the security and protection on all your devices. It also gives you the ultimate flexibility to optimize protection from a web-based console as you add and remove devices.
