Proven Security™

# McAfee® AntiSpyware

## Proven security that helps prevent spyware

**The Aberdeen Group estimates that the majority of PCs have spyware currently installed. Equally alarming, a number of high-profile PC manufacturers claim that up to 20 percent of technical support calls are related to spyware infections.**

McAfee AntiSpyware detects, quarantines, and removes potentially unwanted programs (PUPs), such as spyware, Trojans, dialers, tracking cookies, and persistent marketing programs before they compromise your personal information, invade your privacy, or adversely affect your PC's performance.
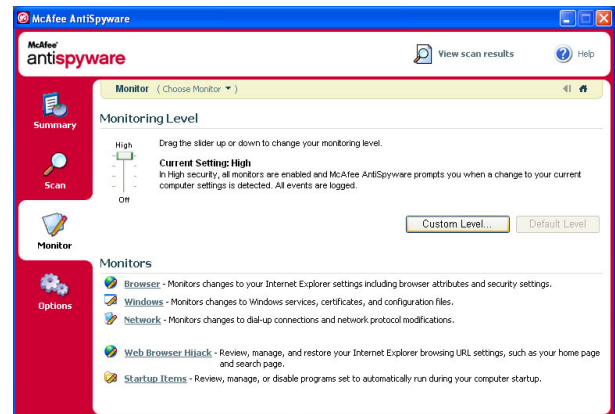

### Detect and prevent harmful programs

Like many people, you probably use your PC for tasks like managing your budget, doing your taxes, creating a resume, and storing your digital photos. In helping you manage your digital lifestyle, your PC can become a digital fingerprint of who you are – and a target for identity thieves. AntiSpyware runs in the background to detect and prevent unwanted, harmful programs, alerting you when these programs are detected on your PC.

→ **Detects a wide range of potentially unwanted programs**, including known spyware, Trojans, key loggers, and dialers.

→ **Customize your scans** to run right now or as a scheduled scan, when and how you want.

→ **Automated, daily signature updates** help keep your PC protected from recently discovered spyware threats.

### Protect your online security

Spyware can actually lower your PC's built-in security settings to allow unhindered installation of programs, or grant unrestricted access to files, system resources, browser settings, and Internet bandwidth. AntiSpyware continuously monitors these sensitive areas for changes and alerts you when a change occurs.

McAfee AntiSpyware continually monitors your PC for changes to your security settings, system files, and registry entries.

→ **Monitors your Internet security settings** alerting you when security settings, such as turning off security alerts, are made.

→ **Detects changes to your browser settings** including changes to your home page or search page.

→ **Detects changes to your system files** such as your system definition file or startup programs.

# McAfee®

## Block persistent Internet ads and pop-ups

The open nature of the Internet allows unsolicited marketers to track your movements and bombard you with unwanted and persistent Internet marketing, including irritating product advertisements or objectionable content.

→ **Revitalizes and optimizes PC performance** by removing unwanted programs that utilize system resources, load into memory, or simply occupy hard drive space.

→ **Provides flexible uninstall options** that allow you to use AntiSpyware as the uninstaller, removing all traces of the program and providing you a quarantined backup copy

→ **Advanced privacy controls** help clear Internet temporary files, Internet viewing histories, and tracking cookies.

## Get the confidence of always-on, always up-to-date security

It's a hassle to keep track of security updates and warnings, but with McAfee you don't have to worry. Our comprehensive, proven products feature automatic updates, and our unmatched security expertise ensures that you always have the latest protection.

→ **Auto-updates run silently in the background**, ensuring you're always protected from emerging and evolving security threats.

→ **24/7, worldwide spyware monitoring** by McAfee's Anti-Virus and Vulnerability Emergency Response Team (AVERT™), who continually monitor worldwide vulnerability activities and then provide immediate protection and removal solutions to AntiSpyware users.

→ **Real people, real help, for free**, our experts are available 24 hours a day, seven days a week via Internet chat at www.mcafeehelp.com

→ **30-day money-back guarantee**
