

McAfee Mobile Security

Your mobile device contains many of the important details of your life: contacts, calendar, messages, photos, videos, and more.

If it gets lost, stolen, infected with a virus, or an app is unknowingly mining your personal information, you could lose your personal data, but also could possibly expose yourself, your friends, or your colleagues to credit card or bank account fraud and identity theft.

McAfee Mobile Security protects both your mobile device and your valuable data.

Smartphone and tablets have become indispensable extensions of who you are and what you value—your family, personal contacts and pictures, and the freedom to work, shop, and bank wherever and whenever you choose. Like any other valuable, these devices need protecting—along with your identity and your privacy. And nothing protects your smartphones and tablets more easily or completely than the industry-leading McAfee® Mobile Security.

Protect Yourself from Prying Eyes and Risky Apps

Selectively share your apps

Let's say your kids or your friends want to play a game or use an app on your phone or tablet. You can easily set up different profiles to share your stuff with others. Or, just, lock up any app with a 6-digit PIN.

Know what your apps are up to

Mobile apps are great. But they could also gather a great deal of information—personal things you may not want to share. Our proprietary technology taps into a global network of threat intelligence and generates a customized report detailing exactly what information your apps are collecting from you empowering you to remove the offending apps.

Block obnoxious spam

It's annoying, it infringes on your privacy, and now it's easy to eliminate. Our advanced filters stop spammers, incorrect numbers, and unwanted texts.

Track It, Lock It, and Wipe It if Lost or Stolen

Lock it remotely

Life happens. Things go missing. Now you can prevent any possible misuse of your smartphone, tablet, and personal data by remotely locking them—even the data on your removable memory card. Once you do, your device displays a hard-to-miss "contact me" message.

Wipe it remotely

If you think your device is gone for good, protect your privacy by remotely and permanently deleting the data on your phone and removable memory card. You can even back up data before a remote wipe so nothing is lost.

Backup and restore your things

A lot of people don't think to back up their mobile devices. We've made it easy to preserve irreplaceable personal information on demand,

on a schedule, or before you wipe your missing smartphone or tablet. Once your valuables are backed up, it's simple to restore them to a new device.

Locate and track it

Sometimes you just need a little help finding things. Now you can locate your phone or tablet on a map using any browser. Go ahead and remotely lock it until you can retrieve it. Or, you can activate an alarm to make it "scream."

Stamp out Malware

Guard against viruses and spyware

It used to be that mobile devices were somewhat insulated from the bad guys. That's no longer the case. McAfee Active Protection™ technology constantly scans your devices to protect against the latest viruses, worms, botnets, spyware...

McAfee technology scans deep into your apps, files, SD cards, and Internet downloads to root out malware. And while the protection is heavy, it's amazingly light on resources and battery life.

Stay Away From Malicious Sites and Links

Search and shop securely

As you navigate the web, McAfee Mobile Security blocks malicious websites. It doesn't matter if you type a bad URL in directly or it comes up through a search engine.

Stay safer while being social

Most of today's threats are making their way through email, texts, and social networks sites. We block potentially risky links no matter how they present themselves. We'll even safeguard you against potential phishing sites, browser exploits, and malicious quick response (QR) codes.

30-Day Money-Back Guarantee

If you are not 100 percent satisfied, you will receive a full refund.

Note: Applicable for Annual subscriptions only

Specifications

Support

Unlimited email support
(in English only)

Supported device operating systems

So Much Protection, yet So Simple to Manage

McAfee Mobile Security downloads and installs with just a few clicks. It offers both the extensive functionality of the online McAfee web portal and a simple mobile device interface that lets you quickly take care of any needed security tasks. You can even initiate the tasks highlighted above (such as locate, lock, and wipe) using simple text messages and PIN codes sent from a friend's device.

Designed for Mobile Devices

McAfee Mobile Security requires minimal battery and memory resources, so you don't have to worry about changing the way you currently use your smartphone or tablet.

Choose the edition for your device—McAfee Mobile Security is available for smartphones across many mobile platforms as well as Android tablets. See the "compare" section for information on the functionality of each.
