McAfee

Proven Security™

McAfee® Personal Firewall Plus

Proven security that helps prevent hacker attacks

The Internet has revolutionized the way we communicate, shop, and bank, making it easier for users to communicate with any website or individual PC.

When you connect to the Internet without personal firewall protection you become extremely vulnerable to hacker attacks. Hackers can access sensitive personal information, such as credit card numbers or on-line tax records, making you a potential identity thief victim.

Control access to your computer

When you connect to the Internet without a firewall, you're vulnerable to hacker attacks. Hackers can steal your credit card numbers, tax records and passwords, or even disable your PC completely. They can also remotely install programs that capture and send your personal information over the Internet. With its intelligent monitoring of Internet traffic, Personal Firewall Plus prevents unwanted inbound and outbound connections, keeping your information – and your PC – safe.

→ **Complete inbound and outbound protection** for safe Internet access.

→ **Pre-set security levels**, ranging from 'open' to 'lockdown', allow you to quickly configure your firewall settings

→ **Advanced outbound access controls** for granting an application Internet access, for a specified session only, or for the complete, immediate lockdown of your Internet connection if you suspect an attack is taking place.

Identify the source of attacks

Hackers can try to break into your PC from anywhere in the world. With easy-to-read, activity maps, Personal Firewall Plus identifies the source of potentially hostile attacks. And to help you stay safe from future attacks, Personal Firewall Plus is the only firewall integrated with HackerWatch.org, a site dedicated to providing additional information on hackers and self-testing tools.
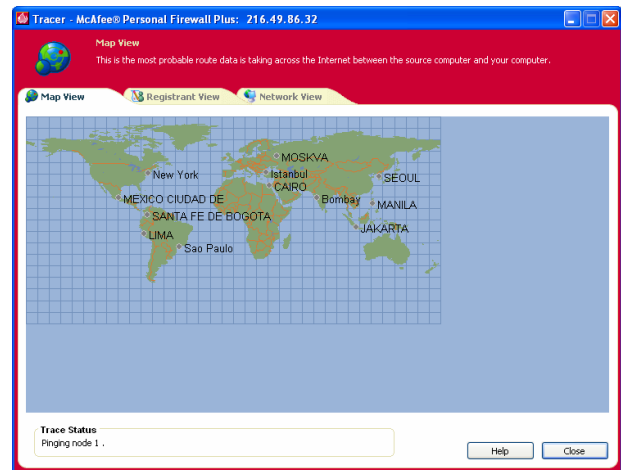

McAfee Personal Firewall Plus visual trace helps track the source of a potential hacker attempt.

→ **Hackerwatch.org integration** links to an anti-hacking database and Worldwide Hacker Activity Map, offering tips on responding to specific attacks, self-testing tools and channels to notify online authorities of hacker events

→ **Logs unsolicited inbound connection attempts,** which can be viewed, sorted, and exported for delivery to third parties, such as ISPs.

McAfee®

Easily manage the security of your PC

Personal Firewall Plus' intuitive interface provides an effortless way to configure, manage, and control Internet traffic. With advanced monitoring, color-coded security alerts, and detailed logging, Personal Firewall Plus secures your PC while you're online.

→ **Intelligent application handling** automatically denies outbound Internet access to known malicious applications, while allowing pre-trusted applications to connect without unnecessary alerts or false alarms.

→ **'Quiet, load-and-go' installation** makes it easier to install immediate, pre-configured protection.

→ **One-click home network support** allows novice users to configure use on a home network.

→ **Gaming suspend mode** auto-detects whenever you're in 'full screen' mode, suppressing firewall pop-up messages and enhancing your on-line experience.

Get the confidence of always-on, always up-to-date security

It's a hassle to keep track of security updates and warnings, but with McAfee you don't have to worry. Our comprehensive, proven products feature automatic updates, and our unmatched security expertise ensures that you always have the latest protection.

→ **Auto-updates run silently in the background**, ensuring you're always protected from emerging and evolving security threats.

→ **Real people, real help, for free**, our experts are available 24 hours a day, seven days a week via Internet chat at www.mcafeehelp.com

→ **30-day money-back guarantee**

System Requirements
→ Microsoft® Windows 98, Me, 2000, or XP
→ Personal computer with Pentium-compatible processor
  ○ Windows 98, 2000: 133 MHz or higher
  ○ Windows Me: 150 MHz or higher
  ○ Windows XP (Home and Pro): 300 MHz or higher
→ RAM
  ○ Windows 98, Me, 2000: 64 MB
  ○ Windows XP (Home and Pro): 128 MB
→ 35 MB hard disk space
→ Microsoft® Internet Explorer 5.5 or later
