

McAfee® SpamKiller®

Proven security that blocks unwanted & malicious e-mail

Spam is everywhere - unsolicited, inappropriate and offensive e-mail, embarrassing product pitches, and other annoying messages invading your inbox.

What was once an annoyance has turned dangerous, as spam has become a means for criminals to steal personal and financial information using fraudulent 'phishing' e-mails posing as reputable financial institutions.

Prevent spam from reaching your inbox

Spam used to be just a nuisance – now it's become a way to steal your personal and financial information. Using advanced filtering techniques, SpamKiller lets you easily block and filter spam from within your existing Microsoft® Outlook® or Microsoft Outlook Express e-mail programs.

- **Advanced filtering options** include meta-character and junk-text filtering
- **Streamlined account auto-detection** provides hands-off setup, configuration, and integration with your existing e-mail accounts
- **Invisible text & image filtering** zeroes in on colorless content and/or image-only or image-heavy e-mails that spammers use to evade anti-spam engines.
- **Intentional misspelling filtering** helps detect spam with intentional misspellings, including improper capitalization or character replacements (e.g., m0rtga.ge in place of mortgage).

Defend against 'phishing' scams

The growth of online shopping and banking has created a new security risk: 'phishing' scams that attempt to elicit confidential information. In these attacks, e-mails are sent out that appear to be from a reputable brand, and routinely include a link to a fraudulent Web site that collects your personal information. SpamKiller uses advanced technologies to identify and block access to these 'phishing' Web sites, safeguarding you from identity theft.

McAfee SpamKiller provides a summary view of all spam filtering activities.

- **McAfee AntiPhishing plug-in** identifies and blocks known and potential 'phishing' websites and scams.
- **Custom 'phishing' filter rules**, leveraging rules developed for the corporate version of SpamKiller, consumers are protected by a unique set of powerful 'phishing' specific spam filters.

Customize and personalize your protection

SpamKiller protects against the latest unwanted, inappropriate, and fraudulent e-mails with automatic spam filter updates. In addition, as you use your e-mail, SpamKiller's advanced filtering protection learns from your use patterns as to what you consider appropriate or inappropriate types of e-mail. Custom filter rules are also easily created to further personalize your e-mail experience.

- **Easily import 'friend's lists'**, permanently recognizing friends' email addresses as trusted e-mail sources.
- **Immediately "rescue all"** from the same sender or from a newly added friend using white-listing.
- **Automated error messages** send an error message to the sender so that it appears your e-mail is invalid – helping to keep your e-mail address off spammer lists.
- **Abuse reporting** allows you to report spam abuse to web hosts, Internet service providers, and bulk e-mail senders.
- **Filters multiple e-mail accounts**

Get the confidence of always-on, always up-to-date security

It's a hassle to keep track of security updates and warnings, but with McAfee you don't have to worry. Our comprehensive, proven products feature automatic updates, and our unmatched security expertise ensures that you always have the latest protection.
