McAfee Internet Security for Mac

Essential, award-winning protection for your Mac

Mac users are not vulnerable to the same viruses and threats that have traditionally plagued PCs but the Internet has leveled the playing field. Mac users are now just as susceptible to online risks as PC users. With the rise in adoption of the Mac OS, hackers and thieves are focusing their efforts to attack Macs now more than ever.

Keep your Mac shielded with McAfee Internet Security for Mac—essential anti-malware software for Apple owners. Browse, shop, and bank online with peace of mind knowing your Mac and online identity are protected against online identity theft and malicious downloads.

What's Included in McAfee Internet Security for Mac:

Features	What it does	How it protects
McAfee Active Protection™	Detects, quarantines, and blocks malware.	If we find something malicious, we isolate it so it can't cause damage to your Mac.
NetGuard	Two-Way Firewall system monitors and stops traffic in and out of your Mac trying to connect to suspicious servers and known botnets	Prevents hackers from gaining access to your Mac and stops cyber criminals from using your Mac to spread viruses and online threats.
SiteAdvisor®	Identifies URLs as safe, potentially risky, or known to be risky to visit.	Helps you make smarter decisions about what you click, protects you from malicious downloads, blocks visits to bad links when using social media.
Application Protection	Identifies software applications that are not authorized by, or not signed with, Apple Certificates.	Blocks applications from running if they do not meet safety criteria.
Automatic Threat Updates	Detects and deploys real-time protection when McAfee identifies new threats to Mac systems.	Mac threats are rapidly increasing every day. With McAfee Internet Security for Mac, your Mac is protected from future threats for complete peace of mind.
