McAfee Internet Security 2013
Comprehensive, award-winning PC security to freely explore online

People want to enjoy the benefits of connecting, surfing, and shopping online and don’t want to think about security risks. At McAfee, we live and breathe digital security, relentlessly working to stay several steps ahead of the bad guys. Every second of every day, we focus on one thing: keeping your digital life safe, so that you can surf, shop, and socialize online with confidence.

**Fend Off Viruses and Malware**

*NEW High-performance scanning engine*—We built our next-generation scanning engine to guard your PC from the latest viruses, Trojans, spyware, rootkits, and other threats, all without seriously compromising battery life or slowing your PC down.

*ENHANCED Safe searching and shopping*—With color-coded icons next to every search result, including popular social networking sites, you’ll know if the site you’re about to visit is safe.

*ENHANCED Digital data message*—including the location of the blocked IP address and what makes the connection unsafe.

*NEW Home screen*—Got a touch-friendly device? Our new home screen is built with your fingers in mind. And it still works great with a track pad or mouse, so navigating to common security tasks is a breeze—on any device.

*ENHANCED Security reports*—We’ve redesigned the security report to bring you the information you need in visually interesting ways. The new report includes relevant images and links for an easier-to-understand snapshot of what’s going on in the world of security.

*NEW Vulnerability scanner*—If your OS and programs are out of date, you could be vulnerable to threats. The new vulnerability scanner checks your PC for missing updates, and then recommends solutions to keep you safe.

*NEW Malicious ads and popup protection*—Websites don’t always have control over the ads they display. Sometimes, you might find a risky ad on a site you trust every day. McAfee automatically blocks suspect malicious ads to keep you protected.
Block Spam and Dangerous Email

**ENHANCED Antispam**—All those unwanted emails aren’t just annoying. They’re dangerous. We’ll filter out all the shady stuff to keep you and your inbox protected. And the antispam engine integrates with new technology to make sure the right emails are making it into your inbox.

Keep Your Family Safe

**ENHANCED Parental controls**—Worried about your kids seeing stuff they shouldn’t? Parental controls let you block inappropriate sites with age-based rules and adjustable categories. You can even limit the amount of time they spend online, and print reports for every user you’ve set up.

**Surfing report**—Find out what your kids have been up to online through the surfing report. You’ll know when they log in, any attempts to access forbidden sites, and how much time they’ve spent online.
