

McAfee® virusscan® professional

your business' best protection against PC viruses

2005 version 9.0

McAfee® VirusScan® Pro multi-license option provides businesses with award-winning PC security for comprehensive, real-time defense against viruses, mass-mailing worms, Trojans and other malware, as well as advanced spam and spyware protection. The software also includes McAfee® Shredder, which helps permanently delete file traces from your hard drive, removing digital footprints that hackers and other identity thieves look to exploit to recover personal data. Automatic product updates ensure protection against the very latest threats. McAfee software enables businesses, giving them the freedom to save, share and send data over the Internet.

Available in 2-user and 5-user licenses.

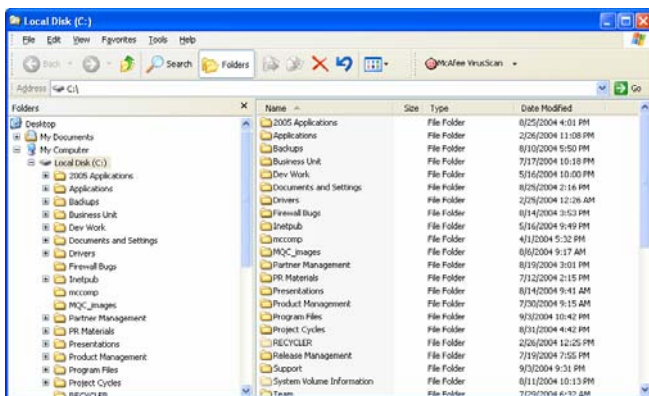

Prevents viruses when e-mailing, downloading and surfing

Every time you connect to the Internet, McAfee VirusScan automatically checks e-mail and e-mail attachments, Internet downloads, Instant Message attachments, chats and shared disks for viruses before they infect your hard drive or desktop.

Improved! Inbound and outbound e-mail scanning helps detect and remove mass-mailing worms, viruses and Trojans before they reach your computer's hard drive.

WormStopper™ monitors suspicious mass-mailing behaviors and notifies users once these activities have been detected.

ScriptStopper™ technology helps prevent new, script-based threats like the "I Love You" virus.

McAfee VirusScan allows you to scan files and folders directly from within the Windows Explorer window.

Destroys viruses and virus-like threats

McAfee VirusScan automatically identifies known viruses, mass-mailing worms and Trojans that may present a threat or create problems. Any suspicious files are immediately identified and, if possible, automatically cleaned. Those files that cannot be cleaned can then be either deleted or quarantined.

Identifies spying and pop-up advertisement programs

More often than you may think, your online activity may be tracked by unsolicited third parties, threatening your privacy and data security. McAfee VirusScan detects potentially unwanted programs (PUPs) — including spying and pop-up ad programs like spyware, adware and web dialers, among others—that may collect personal information without permission.

Helps keep Inboxes free from unwanted and inappropriate e-mail

McAfee SpamKiller features advanced filtering technologies to stop junk e-mail, including foreign-language character-based spam. New features catch spam that rely on spelling variation matching, as well as image-only content in attempts to bypass text-based filtering rules — a practice used extensively by pornographic spammers.

Scam filters help protect against "phishing", frauds, hoaxes, and other identity theft e-mails. The inclusion of "One-Click Block" functionality automatically eliminates those e-mails you label as spam all at once. An automatic import of designated friend lists ensures you never miss e-mail from your friends, family and co-workers.

McAfee SpamKiller's "self-learning" technology, improves positive detections and helps reduce annoying false positives.

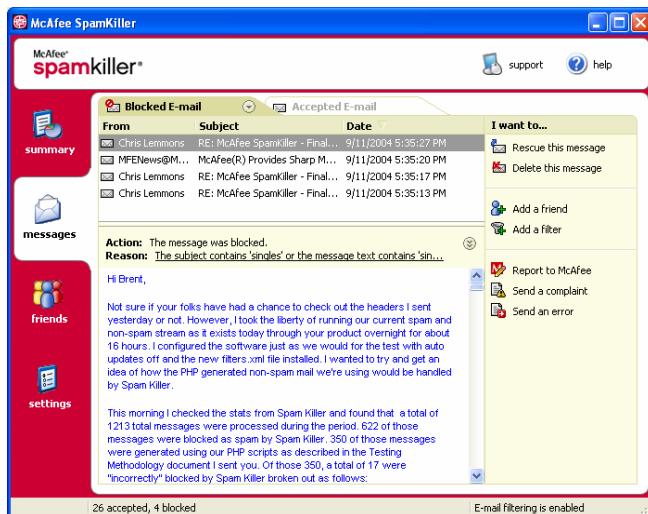

Improved! Comprehensive spam filtering automatically identifies and removes most junk e-mail.

New! Outlook Express integration enables an easy-to-use folder within your mail client to block spam directly from within Microsoft Outlook Express.

New! Filtering and spelling-variation matching and invisible text to catch elusive spammers.

New! "Image mostly" filters for image-only or image-rich e-mails.

Block unwanted and inappropriate e-mail
 SpamKiller's multi-layered filtering process uses state-of-art Bayesian technology plus signature-based filters to eliminate spam. This extremely effective multi-layered approach combines machine-based, user-based and community-based learning capabilities to identify and block spam. Together these filtering processes analyze blocked and accepted messages to train the core filtering engine make future decisions on what is spam and what is legitimate e-mail

McAfee SpamKiller provides an easy to navigate user interface that allows you to review blocked and accepted spam.

Enhances privacy with a digital document shredder
 Even when you delete files from your computer, they may not be completely wiped from the hard drive. Erased files leave digital footprints that hackers or other unauthorized users can access. McAfee Shredder helps permanently delete file traces from your hard drive, removing digital footprints that hackers and other identity thieves look to exploit to recover personal data.
